Sequence 342, Application US/09134001C
Patent No. 6380370
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCC
TITLE OF INVENTION: DEPLOEMENTS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT FILING DATE: 1999-08-13
PRIOR PPLICATION NUMBER: US 60/064,964
PRIOR PLING DATE: 1997-11-08
PRIOR PLING DATE: 1997-11-08
PRIOR PLING DATE: 1997-11-08
PRIOR PLING DATE: 1997-11-08
FROM PRIOR PLING DATE: 1997-10-08-14
NUMBER OF SEQ ID NOS: 5674
SED ID NO 342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3040 AAGAGATGTTGCAAGGAGATCATATGATGCTGATATGGAAGTTGATGGATTTGAAGATTA 3099

Sequence 19, Application US/08911445
Patent No. 5876713
GENERAL INFORMATION:
APPLICANT: TAKEDA CHEMICAL INDUSTRIES, LTD.
TITLE OF INVENTION: NOVEL GLUTAMINE:FRUCTOSE-6-PHOSPHATE
TITLE OF INVENTION: AMIDOTRANSFERASE, ITS PRODUCTION AND USE
NUMBER OF SEQUENCE: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: FETHERSTONHAUGH & CO.
STRRET: P.O. BOX 2999, STATION D
CITY: OTTAWA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0.9%; Score 35; DB 2; Length 1458;

relully 9

relula hybrida RdRP gene, partial.

ION AJ011979

SON AJ011979.

RdRP gene; RNA-directed RNA polymerase.

Petunia x hybrida.

Fetunia x hybrida.

Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Asteridae; euasterida I; Solanales; Solanaceae; Petunia.

E 1 (bases 1 to 4579)

Solanaceae; Petunia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission

Solanum tuberosum (strain Russet Burbank) cDNA to mRNA.
Solanum tuberosum (strain Russet Burbank) cDNA to mRNA.
Solanum tuberosum
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
Asteridae; euasterids I; Solanales; Solanaceae; Solanum.

NOTE: This is a 'working draft' sequence. It currently consists of 54 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    secontig of 1248 bp in length gap of unknown length of contig of 1391 bp in length ocntig of 1391 bp in length ocntig of 1371 bp in length contig of 1271 bp in length gap of unknown length gap of unknown length gap of unknown length contig of 1562 bp in length gap of unknown length gap of unknown length gap of unknown length gap of unknown length contig of 1061 bp in length gap of unknown length contig of 1032 bp in length gap of unknown length contig of 1038 bp in length gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This record contains 82 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. Will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact: sequence_submissions@genome.wi.mit.edu

Homo sapiens clone RP11-14M16, LOW-PASS SEQUENCE SAMPLING.
ACO22577
ACO22577
HTG 13-JUL-2000
corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL: Sw.; SWISSPROT; TI., TREMBL; Wp., WORMPEP: Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                    http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. on MAY 25, 2002 this sequence version replaced gi:20803513.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: This record contains 88 individual
sequencing reads that have not been assembled into
contigor. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
voverlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft' sequence."
